INVESTMENT FOCUS

The aim of the fund is to achieve long-term outperformance of the European equity markets through the use of size, quality, value and sentiment factors.

In order to achieve this goal, the fund primarily invests directly in stocks of companies that belong to the MSCI Europe Index. Stocks are selected by using a quantitative approach.

A quantitative approach involves drawing conclusions about the possible future development of markets or individual stocks from market data (economic data, key share figures, ...), using mathematical and statistical methods.

cal and statistical methods.

When selecting stocks, ecological, social and ethical criteria are also taken into account (for details, see the ESG disclosures for the product on the website www.iqam.com).

Investments in stocks denominated in foreign currency are possible, but do not have to be hedged, which is why exchange rate changes can result in additional opportunities and risks. Derivatives are used both for hedging and as part of the investment strategy.
